

PCSC

LiNC-VIEW™ by PCSC is an advanced CCTV and graphical alarm control system. Integrated with PCSC's LiNC-NET access control system, LiNC-VIEW provides a powerful tool for CCTV, alarm graphics and intercom control.

LiNC-VIEW's advanced alarm monitoring provides graphical user interface (GUI) to monitor and control CCTV, Alarms, Sound Outputs and Access Control points. Using simple Windows point-and-click operations, the user can easily control devices such as cameras and VCRs and perform unlocking and locking doors.

System status, alarms and door statuses are clearly displayed on the actual facility floor plan. When there is a status change, the floor plan's affected area changes color, sounds a warning and can even notify the user through a pager. Camera(s) can be automatically set to capture the event and displayed to the guard's terminal. If additional information is required, just "point and click" and the operator can go from an overview to a detailed floor plan. It's that simple!

ONSCREEN FEATURES

- Displays list of acknowledged but unreset alarms and unsecured devices
- Displays a list of unacknowledged alarms.
- Alarms can be acknowledged in any order
- Displays a list of shunted/bypassed alarms
- Displays a list of unlocked doors/activated devices
- On-screen live video display
- Icons in map display window show status of all system devices
